SOLUTION SNAPSHOT

HIDDEN LENS FINDER	RF SIGNAL TRACKER	MAGNETIC FIELD SENSOR
REAL TIME SOUND ALERT	POCKET-SIZE DESIGN	COMPLETE PRIVACY PROTECTION

Built for Real Operations

Protect your personal privacy instantly using this smart Anti Spy Hidden Camera Detector that scans hotel rooms and offices for secret lenses. Detect wireless signals, bugs, and hidden tracking devices easily with this lightweight tool built for complete peace of mind anywhere you go.

CAPABILITIES

Key Features & Product Modules

Ultra Sensitive RF Scanning Chipset

Captures invisible radio frequencies and wireless waves flowing through the room instantly. Advanced modern processing core blocks normal router interference to target only hidden spy frequencies.

High Reflection Infrared Laser Array

Shoots structured red light rays that bounce off any hidden glass camera lens in the area. Smart optical wavelength reveals pinpoint camera lenses even if they are completely switched off.

High Precision Magnetic Induction Core

Identifies the magnetic force inside hidden electronic devices or GPS vehicle trackers. A super sensitive internal coil triggers alerts for sleeping or dead trackers hidden under car seats.

Smart LED Signal Strength Bar

Lights up sequentially to guide the operator closer to the exact hiding spot of the threat. Multi level visual layout acts like a physical map, making device hunting completely foolproof.

Multi Mode Dual Feedback Alert System

Switches between loud audio beeps or private vibrations when a target bug is discovered. Dual action engineering lets you execute secret sweeps without alerting anyone nearby.

Stepless Sensitivity Tuning Dial

Allows the user to fine-tune the detection distance and filter out background city noise. Ultra smooth mechanical dial gives you full manual control over the tracking scope in seconds.

Eco Friendly Fast Charging Battery

Stores continuous, stable electrical energy to power up all scanning sensors simultaneously. Upgraded low-drain battery cells hold charge for weeks, making it always ready for sudden trips.

Impact Resistant ABS Armor Shell

Houses and protects the delicate internal security sensors from sudden drops and hard pressure. Specialized lightweight compound combines heavy-duty industrial toughness with a pocket friendly feel.

Where This Product Fits

Corporate Briefing & Secure Strategy Rooms

Shopping Mall Fitting Rooms & Public Privacy Safety

Executive Boardrooms & High-Level Meeting Prep

Premium Hotel Rooms & VIP Guest Privacy Safety

Private Offices & Sensitive Business Cabins

OPERATIONAL VALUE

Software, Benefits & Outcomes

Real-Time Signal Analytics

This section monitors the air and displays live graphs of any wireless or radio frequency signals found in the room.

- View continuous wave patterns to see exactly when a spy device starts transmitting data.
- Automatically detects and labels whether the signal is coming from a Wi-Fi camera, a Bluetooth bug, or a 4G tracker.
- Uses signal strength calculations to show how close or far the hidden device is from you.

Smart Alert Control Panel

This feature lets users customize how the software and hardware react the exact moment a hidden threat is discovered.

- Set specific alarm triggers so the software ignores safe office Wi-Fi networks and only flags unknown devices.
- Sends private notifications or vibrations directly to your connected screen or phone without making loud sounds.
- Runs a rapid self-test on your detector hardware to make sure all scanning sensors are working at 100% accuracy.

Digital Scanning Logbook

This smart portion acts as a safe database that automatically saves reports of every room inspection you finish.

- Keeps permanent records of scanned rooms with custom name tags
- Stores data on all found spy gear, including the exact date, time, and signal power for future proof.
- Download clean, professional security sweep summaries with one click to share with management or clients.

Case Studies & Client Feedback

06

"Detection accuracy improved by 40% after switching to this system. The AI-assist feature genuinely reduces operator fatigue during peak hours."

Col. (Retd.) Aminu Bello

Head of Security, International Airport Authority

RESOURCES

Media & Questions

07

Q. Can this detector find cameras that are turned off?

A. Yes. By using the Infrared Lens Scanner mode, the device can find the physical lens of a camera even if it is powered off or not recording.

Q. How do I know when it finds something?

A. The device will alert you with a beep, a vibration, or by showing lights on the LED display. You can choose the mode that works best for you.

Q. Does it work through walls or furniture?

A. It is very effective at finding signals and magnetic fields through thin walls, clothes, and furniture. For the best results, we suggest moving the device close to the surface you are checking.

Q. Can I use earphones with this device?

A. Yes. You can connect earphones for silent detection. This allows you to find hidden bugs without making any noise.

Ready to deploy Anti Spy Hidden Camera Detector?
